

1. This event will be in 3 stages....stage 1 will be before Dharohar and consecutive stages will be on dharohar, the exact timings will be given shortly to interested participants.
2. The registration fee is ₹50 per person(solo) and ₹100 for each team(max of 3 members).
3. The event will have no monetary prize as we think that coders don't code for money but for the satisfaction of winning(Winner will be awarded a trophy).
4. BUT all the participants who cleared the first stage AND have paid the registration fee will be given a certificate
5. The event's First stage will be a "free-for-all" (no fee required) solo competition with short questions (like MCQ, find the errors, etc.), the participants qualifying this round will be allowed to progress further.
6. The exact details about the second and third round will be given at the date of main event(during dharohar), but roughly speaking the second round will be to optimize a given "C language" code(and no I don't mean to just reduce the number of lines of codes), and the final stage will be to solve a problem using programming(preferably C language).
7. Oh right! and did I tell you that the clue for the next round will be in the output of the previous round? Well that's how we like it so "Get ready to tire out your keyboard this Dharohar because the CotY is here"
